EDUCATION

Rajkiya (Government) Engineering College, Bijnor

Nov 2021 – Jun 2025

B.Tech in Information Technology — Dr. A.P.J. Abdul Kalam Technical University, Lucknow

SKILLS SUMMARY

Languages: Java, Python, C++, SQL

Frameworks/Tools: Spring Boot, Git, JPA/Hibernate, IntelliJ IDEA, SQL Workbench

Technical Skills: Data Structures & Algorithms, REST API Design, Debugging, Problem Solving

EXPERIENCE

Software Development Engineer 1 - PolicyBazaar

June 2026 - Present

On-site Gurugram Office

- **Owned** backend development of Java Spring Boot microservices powering healthcare and wellness services for **50K+ users**.
- **Designed and delivered** scalable RESTful APIs using **Spring Boot, JPA/Hibernate, JWT, and MySQL**, ensuring secure and reliable backend services.
- **Integrated** Kafka-based asynchronous messaging for event-driven communication across distributed microservices.
- **Optimized** application performance through SQL query tuning, caching, validation frameworks, and backend performance enhancements.
- **Collaborated** with product, QA, frontend, and DevOps teams to deliver production-ready features and resolve critical production issues.
- **Reviewed** code, performed root cause analysis, and implemented scalable backend solutions following microservices architecture.

Java Backend Intern - PolicyBazaar

July 2025 - November 2025

On-site Gurugram Office

- **Developed** a Spring Boot microservice powering healthcare consultations, enabling **10K+ online/offline bookings** with patient profiling and improving booking reliability.
- **Optimized backend performance** by implementing **validation frameworks, In-memory caching, and timezone-aware utilities**, reducing **API response time**.
- **Engineered** health data APIs for **AiSHA**, enabling **real-time health metric visualization** and secure **MySQL** data storage with JWT-based authentication.
- **Created** highly scalable and secure APIs serving **15K+ users** across Android and iOS (**DocPrime App**), hardening backend against **SQL injection** and **DDoS attacks**.

PROJECTS

AiSHA - Your Personal AI Health Assistant (Live in DocPrime App by PolicyBazaar)

Architected and deployed a production-grade **FastAPI** microservice using **rPPG** technology for real-time biometric signal analysis, predicting **8+ health metrics** including SpO2, HRV, and Blood Pressure. **Integrated AWS EC2, Kafka, and RESTful APIs** to enable scalable, secure, and asynchronous data streaming for 15K+ mobile app users. **Developed** ML-based inference pipeline using **Scikit-learn and NumPy**, achieving **95% accuracy** in health metric predictions on test datasets. **Implemented** robust **JWT authentication**, error handling, and structured logging, reducing API downtime and improving data reliability.
